Office Action Summary

Application No.

09/401,939

Applicant(s)

SCOGGIE ET AL.

Examiner

Jean Janvier

Art Unit

3622

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 32-70 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 32-70 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date ____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: ____.

Response To Applicant's Arguments

In response to the Applicant's remarks, the Examiner has removed the previous Claim Objections.

Further, Applicant's potential arguments with respect to claimed invention have been considered but are moot in view of the new ground(s) of rejection.

Detailed Action

Specification

Claim Status

Claims 32-70 are currently pending in the Application.

General Comments

Concerning claims 32, 45 and 58, in the limitations "generating token data depending on said selection data", the term "token" defines coupon offers preferably in coded form, such as bar codes, but the token is not immediately recognized as a coupon per se (although it has

Art Unit: 3622

coupon data encoded thereon). Subsequently, the token is transmitted to the user or user's computer and the user takes the token to his selected store, encoded on the token, and receives, upon purchasing the required item as encoded on the token, the appropriate purchase incentive or discount or promotion automatically or a voucher, redeemable on a future purchase, may be provided to the user instead and in accordance with the purchase incentive or promotion received from the central computer database and stored in the local store server database (See embodiments of figs. 13 and 18 of the specification). In other words, the token, which can very well be a piece of paper, has data similar to coupon data encoded thereon except for the discount value or the purchase incentive itself that is stored locally at the redemption site or on a remote central repository accessible by the redemption site system. In any event, whether a token or a coupon (e-coupon) is being presented for use, the redemption is virtually or substantially performed the same way, especially if the coupon distribution and redemption are conducted electronically.

Finally, "generating a purchase incentive based..." is interpreted as --retrieving the purchase incentive from the local store server in response to the token bearer's or identified user's purchase of the required item as read from the token--. Here, the "purchase incentive" was earlier transmitted from the main computer central repository to the selected local store server database in response to the user's selection.

Claim Objections

Claims 32, 44, 45, 57, 58 and 70 are objected to because of the following informalities-

Art Unit: 3622

Concerning claim 32, there is a gap between the step of “transmitting said token data from said main computer to said personal computer over said computer network” and the step of “identifying said token data in a retail store in association with items being purchased at said retail store”. Here, it is not clear how the token data are being associated with a consumer during a transaction or whether or not the token data are made available in a database for later retrieval or being printed on a piece of paper at the personal computer or encoded on a medium or a card and the consumer presents the printed paper or the card, having the token data imprinted or encoded thereon respectively, to effect a redemption at the retail store. In prosecuting the claims, the Examiner assumes, in one instance, that the token data (coupon selection information) are either printed on a piece of paper at a terminal or encoded on a card, which is presented at a checkout during a redemption and the printed paper or card is being referred here as a token. It is further assumed that the token or printed paper (receipt reminder) or card can be used as an identification means to identify the customer or consumer, at the retail store, to thereby retrieve the token data (coupon selection data) from a database, which stores the token data (coupon selection data) under the consumer’s account. Claims 45 and 58 suffer from the same deficiencies and are objected to under a similar rationale.

Concerning claim 44, “...**one of** an intranet **and** the Internet” should apparently be -- “...**one of** an intranet **or** the Internet--. Claims 57 and 70 suffer from the same deficiencies and are objected to under a similar rationale.

Appropriate corrections are required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 32, 33, 35, 37-44, 45, 46, 48-57, 58, 59 and 61-70 are rejected under 35 U.S.C. 102(b) as being anticipated by Nichtberger, USP 4,882,675.

As per claims 32, 33, 35, 37-44, 45, 46, 48-57, 58, 59 and 61-70, Nichtberger discloses a system for electronically distributing and redeeming, cents-off merchandise coupons. An electronic display of coupons valid for use in a particular store is presented to customers in that store via a terminal (personal computer). When a customer makes a selection of coupons from the display, coupled to the personal computer, the selection is recorded in a storage medium. The customer is subsequently identified, via an identification means or card (or receipt reminder or token associated with the selection), at a store checkout station as the one who had earlier made the selection. In a preferred embodiment, the identification is made by scanning a special card adapted for use with the system. The items purchased in the store by the customer are recorded and any matches between the coupons selected items, as featured in the selections **(or printed on the receipt reminder or token)**, and the items purchased are determined

Art Unit: 3622

electronically. Then the store checkout system totals the individual incentives related to each matched item currently in the customer's order to generate an accumulative incentive (generating a purchase incentive or accumulative incentive based on the individual matches between the purchased items and the selected coupon items presently in the customer's order), which is immediately credited in accordance with the terms of the matched coupons to the customer's purchase. Redeemed coupons are periodically cleared electronically.

A local unit 20 (personal computer) of fig. 1, associated with a point-of-transaction and coupled over a network to a central computer or main computer or operation center database storing coupon data, presents to the customer an electronic display of coupons available for selection by the customer when the customer insert a special card into the local unit 20 to identify himself. **The card may include a UPC code, which identifies the user and a magnetic stripe on which information (about the selected coupons) can be recorded. The customer then selects the coupons, which he or she wishes to redeem later. The CDR (coupon distribution and redemption) unit 20 records the selection and makes information identifying the customer and the selected coupons available to each of the checkout stations, which comprise the checkout system 18 of a supermarket. A receipt or a token, identifying the selected coupons, may be printed for the user's convenience. Here, it is understood that the receipt is simply a reminder, but not a coupon per se (col. 5: 1-16).**

After the user has made his or her purchases, during a transaction at a participating retailer or supermarket, he or she goes to one of the checkout stations and presents his or her special (proprietary) card, having encoded thereon the customer's identification data and other information (related to the customer's coupon selection at the display or local unit 20), to the

Art Unit: 3622

attendant at the station. The attendant causes the card to be read by a suitable card reader (such as a UPC card scanner) and the checkout system 18 of fig. 1 then automatically credits the customer for the coupons, selected earlier at the display and recorded in a database, he had earlier selected where there are corresponding purchases against which the coupons are to be applied or when a purchased product in the customer's order matches a selected coupon item as read from the database **(or from the receipt reminder or from data encoded on the special card) (receiving a token or special card, having encoded thereon the customer's identification and other information at a checkout and generating a purchase incentive or cumulative incentives by totaling individual incentives related to each selected coupon item in the customer's order and applying the cumulative incentives on the customer's purchase- Col. 5: 17-25).**

Thereafter, information regarding the redeemed selected coupons is transmitted to the central processing unit 16 (or main computer or clearinghouse) of fig. 1, which then automatically debits the manufacturer who distributed or provided the coupons in the first place and credits the supermarket or retailer corresponding to the local station 10 at which the coupon (selected coupons) was redeemed (compensating the retailer for honoring or redeeming the selected coupons- Col. 5: 26-31). Hence, in the preferred embodiment, selection (distribution), redemption and clearing are accomplished automatically without handling of paper coupons by customer or store and thus without the possibility of the types of fraud which now plague the industry (col. 5: 32-37).

See col. 5: 46 to col. 6: 28; col. 10: 51 to col. 11: 34

Art Unit: 3622

Further, during the customer's interaction with the coupon display 20 and coupon selection, after the last screen is presented and a user decision made, an "account choice" record or file (for the purpose of storing the customer's coupon selection) is created in a database **and a receipt or shopping list may be printed. The receipt or token, which is not a coupon per se, includes a receipt number, the product name, size and the savings amount. The printed receipt is used as a reminder to shoppers and can also be used to identify the users of cards, which are not special cards at checkout time during a redemption process.** If a special card is used, a notation to that effect including the period of such use is magnetically recorded on the card memory for future use during a coupon selection transaction and to thereby measure the coupon and redemption effectiveness. The customer's coupon selections are entered in a database file for permanent storage and later retrieval during a redemption process at a supermarket (Col. 11: 35-45).

In general, coupon selection information is reported via a communications link or network (LAN or WAN or Intranet) to the local processor (for storage and later retrieval), which controls the store's automated checkout system. This facilitates a subsequent retrieval and comparison of coupon selected items (coupons selected) to purchased items before individual incentives related to matched items in the customer's order can be added, during a redemption, and applied to the customer's purchase (col. 11: 46-50).

During the introductory period, customers without a special card will instead be allowed to utilize selected cards having a magnetic stripe to activate the CDR unit or display 20 during a coupon selection transaction. **In this case, the number printed on the receipt or coupon selection reminder (token) can have operational significance if the receipt does not bear the**

Art Unit: 3622

account number and if the card does not display the account number in UPC code format.

The customer shops at a supermarket by purchasing items and proceeds to the supermarket checkout station. Since the reminder (token) bears the number under which the customer's selections are filed or recorded by the CDR unit 20 in a database, it (token) is presented at checkout time in lieu of the special card to thereby retrieve from the database the customer's stored coupon selection, during a redemption, and to compare coupon items to purchased items and to effect a redemption, as described above (col. 11: 51-63; col. 13: 65 to col. 14: 7).

See col. 15: 27-43; col. 17: 30 to col. 18: 41.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a), which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Art Unit: 3622

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 34, 47 and 60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nichtberger, USP 4,882,675.

As per claims 34, 47 and 60, although Nichtberger discloses adding or totaling individual incentives, associated with selected coupon items, based on the number of selected coupon items present in the customer's order during a transaction and applying the total individual incentives to the customer's purchase (See above), however, Nichtberger does not expressly teach applying the incentives in a subsequent transaction or shopping trip.

However, it is common practice in the art for a manufacturer or retailer to provide one or more discount coupons or cumulative incentives, during a single shopping at a retail store, to a customer based on whether or not one or more coupon items or triggering items are bought by the customer or based on the amount of money spent by the customer during the transaction, wherein the one or more discount coupons or cumulative incentives (generated voucher) are issued on a medium and redeemable on a subsequent shopping trip (See at least the "Off" Patent cited in the conclusion section).

"Official Notice"

Therefore, an ordinary skilled artisan would have been motivated at the time of the invention to incorporate the publicly disclosed information ("Official Notice"), as shown above, into the system of Nichtberger so as to identify a customer at a checkout in a retail store, during a

Art Unit: 3622

transaction including a redemption, and retrieve from a database coupon data (token data) selected earlier by the customer and stored in the database in order to determine if one or more items in the customer's purchase match one or more items related to the selected coupon data as read from the database and to add up or total individual incentives associated with one or more selected and matched coupon items, based on the number of selected coupon items present in the customer's order during a transaction, which yields to an accumulated purchase incentive (generating a purchase incentive) and to finally provide the (accumulated) purchase incentive or accumulated incentives, redeemable on a subsequent shopping trip, to the identified customer via a medium useful during the future or delayed redemption, thereby luring the customer back to the retail store or an associated POS to redeem the accumulated incentives, while buying more products and spending more money at the retail store checkout or associated POS, which in the end helps increase the retailer's business bottom line.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

USP 5,907,830 to Engel discloses an electronic coupon distribution system providing on-line coupon information for a potential consumer using a personal computer connected to a host computer. A potential consumer using a personal computer and a modem connects to a host computer via the Internet or directly. The potential consumer may specify product preferences or search and view coupons of interest to the consumer. The consumer may then download from the

Art Unit: 3622

host computer coupon information that may be printed on the potential consumer's printer connected to his personal computer. Information identifying the downloaded coupon is coded or encrypted onto the printed coupon to prevent unauthorized reproduction. The coupon distribution system may be used to obtain additional information about the potential consumer for future marketing purposes. The present invention greatly facilitates and makes economical distribution of coupons or certificates.

USP 5,855,007 to Jovicic discloses an electronic coupon communication system for generating and redeeming unique product discount coupons over public computer networks such as the Internet. The system comprises a first Internet node, an Internet coupon server and an Internet coupon notification center. The Internet coupon server generates a unique Internet coupon using a coupon generation process. The Internet coupon server accepts an on-line selection of one of the available unique Internet coupons from a user of the Internet node and transmits the coupon back to the user's printing device or e-mail storage. It then records the transaction in its coupon database and notifies the transaction to the Internet Coupon Notification Center. The Internet Coupon Notification Center subsequently records the transaction. Furthermore, a coupon redemption center can electronically verify coupon validity and record coupon redemption by communicating with the Internet Coupon Notification Center.

USP 5,812,776 to Gifford discloses a system for providing access to network servers. In particular, the process described in the invention includes client-server sessions over the Internet involving hypertext files. In the hypertext environment, a client views a document transmitted by

Art Unit: 3622

a content server with a standard program known as the browser. Each hypertext document or page contains links to other hypertext pages, which the user may select to traverse. The user may also access a hypertext page by providing a conventional telephone number or other descriptor. The server maps such a telephone number or descriptor to a target page identifier using a translation database and automatically directs the client to retrieve the desired page.

USP 5,761,648 to Golden discloses a data processing system for issuing electronic certificates through "online" networks of personal computers, televisions, or other devices with video monitors or telephones. Each electronic certificate includes transaction data and identification data, and can be printed out on a printing device linked to a consumer's personal input device, or electronically stored in a designated database until a specified expiration date. The certificate can be used for various purposes, including use as a coupon for a discounted price on a product or service, proof of a gift or award, proof of reservation, or proof of payment. Consumers access the data processing system online, browse among their choices, and make their selections. The data processing system provides reports on the selected certificates and their use following selection. Certificate issuers also have online access to the data processing system and can create or revise offers, and provide various instructions pertaining to the certificates, including limitations as to the number of certificates to be issued in total and to each individual consumer.

USP 5,594,493 Nemirofsky discloses a smart card is disclosed which includes an optical receiver for receiving promotion data encoded in a television signal and transmitted through a

Art Unit: 3622

cathode ray tube of a television. The smart card also includes circuitry for storing the promotion data and circuitry for executing the promotions associated with the promotion data, including circuitry for displaying a promotion in the form of a UPC code on an LCD display. The smart card further includes circuitry for interacting with a user through the LCD display and a plurality of buttons.

USP 5,420,608 to Choi discloses a display system, which includes storage for receiving a compressed pixel image manifesting at least a pair of encoded colors and a bit MASK that defines which pixels of a pixel subset of the pixel image receive one of the colors. The system comprises a plurality of memory modules. The pixels in the subset are interleaved in the memory modules. A generator is provided for applying signals to cause data to be written into each of modules in parallel. Register means are provided for applying data manifesting the encoded colors to the modules. Control apparatus is responsive to the MASK bits for controlling the generator to write the encoded color data, in parallel and in a single memory cycle, into all pixel positions of the subset that are designated for the color(s) by MASK bit position values.

USP 5,380,991 to Valencia discloses system and method of allowing a shopper to obtain the benefit of reduced prices for certain items without the necessity of redeeming paper coupons is described. The system employs an integrated circuit (IC) smart card containing an erasable memory therein. This memory would contain information relating to a discount coupon amount, as well as information relating to particular products, which have been purchased. This card would be inserted into a reader/writer terminal provided at a retailer's checkout counter. Items,

Art Unit: 3622

which are purchased, are scanned and compared with items to be discounted as well as the information provided by the customer IC smart card. After the cashier has totaled the customer's purchases, the information contained in the IC smart card would be altered accordingly.

USP 5,173,851 to Off discloses a system for creating discount coupons in response to the purchases of products. Improvements disclosed include the printing of a "negative" coupon in response to the failure to purchase a particular product, and the printing of a coupon in response to the purchase of multiple triggering items, either without limitation as to the identification of the items, or with the requirement that the items fall into a predefined trade group. Other features of the invention permit the use of instantly redeemable "coupons," such that an instant discount is applied to a customer bill rather than having a coupon printed, and the logging, without printing, of possible coupon printings for statistical purposes.

Any inquiry concerning this communication from the Examiner should be directed to Jean D. Janvier, whose telephone number is (571) 272-6719. The aforementioned can normally be reached Monday-Thursday from 10:00AM to 6:00 PM EST. If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's Supervisor, Mr. Eric W. Stamber, can be reached at (571) 272- 6724.
